

■ IDNV-Order – for research & ordering

With IDNV-Order retailers can search the catalogues of international publishing houses, create orders and send them to the publishers directly via the IDNV online system. With the data exchange, all participants receive daily up-to-date information on the news and changes from the publishers.

The order system is available for all retailers who participate in the system.

Furthermore, from version 3.0 upwards retailers have the possibility to offer their customers digital items and order them via the integrated internet protocol AODP directly from the servers of publishers and distributors.

Selected Features of IDNV-Order

- The powerful functions of the IDNV catalogue software
- Comfortable ordering directly from the searching database
- Keyboard or serial barcode scanner support
- Possibility of ordering from the publishers or the participating wholesalers
