

■ IDNV-Sales – for order processing

With IDNV-Sales it is possible to receive and process orders sent by retailers via the IDNV ordering system.

The catalogue provides you with an overview of the complete IDNV catalogue and can give you valuable support for planning, marketing and sales.

You can connect the software to your stock control system via interfaces.

Furthermore, from version 3.0 upwards, you are able to retrieve the transaction data of your AODP sales and to control the access to your distribution server for AODP transactions (if you use either a hosting software compatible with IDNV or the AODP hosting service).

The software is available for publishers who are participants of the IDNV network.

Selected Features of IDNV-Sales

- An interface for searching as in the IDNV-Catalogue software
- Reception of orders
- Secure and efficient data transmission
- Customer identification with up-to-date IDNV participant database
- Possibility of entering internal customer numbers in the local IDNV participant database
- Flexible export interfaces for electronic order processing
- Practical printouts with barcodes (for checks or manual order processing)
- Order history in the integrated database
- Possibility of complete automation with data exchange at regular intervals
- Possibility of starting an external program after reception and export via interface
- Online update of master data (Main catalogue, participants, code lists)
- Control of your AODP business partners' access to your hosting server (when using AODP with the IDNV hosting software)
- AODP-ready: Security technology and internet protocol AODP for the sale of digital items already integrated
